STRAFE Fee Calculator — User Guide

A small Windows app that fills the STRAFE **Testing Calculator** from your test workbook and writes the calculated **Fee Amount** back into the sheet, so you don't have to type ~260 rows by hand.

You need: **Microsoft Edge** (already on every work PC) and the test **workbook**. Nothing to install — it's one program file.

---

1. Start the app

Double-click `STRAFE Fee Calculator.exe`.

- The first launch takes ~15 seconds (it unpacks itself). Later launches are quick.
- If Windows shows a blue "Windows protected your PC" box: click **More info** → **Run anyway**. (If it's fully blocked, contact IT — see the note at the end.)

You'll see a window with three numbered steps. Each step lights up green when it's done and unlocks the next one.

---

2. Step 1 — Connect Edge

Click **Connect Edge**.

- A new Edge window opens on the Testing Calculator page.
- **Log in to STRAFE** in that window if it asks. (It remembers you next time.)
- Leave that window on the Testing Calculator page. **Don't close it, don't click around in it** while the app runs.

When step 1 turns green ("Connected"), move on.

> If it fails: close **every** Edge window (check the taskbar and the system tray), then click **Connect Edge** again.

---

3. Step 2 — Choose Excel file

Click **Choose file...**, browse to your test workbook, and select it.

The app checks the file has a **STRAFE** sheet with data rows. When step 2 turns green (showing the file name and row count), move on.

> **Close the workbook in Excel before running.** The app can't write to it while Excel has it open.

---

4. Step 3 — Run it

Click **Run it**.

- Watch the Edge window fill in each row. The log in the app shows every value it writes (e.g. `row 27: G → K27 = 100.0`), and the progress bar shows `12 / 40`.
- **Stop** button: stops cleanly **after the current row**. You can pick up later (see "Stopping and continuing" below).
- **"Redo everything"** checkbox: tick it before running to re-do every row from scratch, ignoring anything already filled in.

The checkpoint (automatic)

After about **10%** of the rows, the app **pauses**, saves, and **opens the workbook in Excel** so you can sanity-check the first batch.

1. Look over the filled-in Actual Value cells.
2. **Close Excel.**
3. Click **Continue** (or **Stop & review** if something's wrong).

Anything you corrected in the sheet during the pause is picked up when it continues.

When it finishes

It asks **"Results look good?"**

- **Yes – all done** → it tidies up (removes the small helper file it uses to track progress). Use this when the batch is finished.
- **No – keep it** → keeps that helper file, so you can fix rows in Excel and click **Run again** — it will only redo the rows you changed.

What ends up in the sheet

For each row it writes the Fee Amount as a **number** into columns **K / L / M / N** (matching the Expected Value columns G / H / I / J).

If the calculator gives **no fee** for a row (e.g. a "Call for pricing" endorsement), it writes the **message text** into that cell instead — those rows need a manual look. The end-of-run summary and the log tell you which rows.

Rows are **skipped** (with the reason written into column K) when the Liability Type or Coverage Type Code is missing, the Liability Type isn't a real dropdown option, or there's no Expected Value.

Stopping and continuing

You can stop any time (the **Stop** button, or **Stop & review** at the checkpoint, or just closing the app). Nothing is lost — progress is saved as it goes.

To continue: start the app again, do steps 1 and 2, and click **Run it**. It **skips every row that's already filled** and carries on from where it stopped. If you **edited an input** on a row that was already done, that row gets redone automatically.

Backups

Just before it writes, the app makes a copy of your workbook next to it called `… (backup).xlsx`. If the run finishes normally, that copy is **deleted**. It's only left behind if a run fails — so you can restore from it.

If something goes wrong

What you see	What to do
"could not attach to Edge"	Close all Edge windows, click **Connect Edge** again.
"no open tab is on the Testing Calculator"	In the Edge window, log in and open the Testing Calculator page.
"… open in Excel"	Close the workbook in Excel.
It stopped with "STOPPED at row N"	Read the reason shown. Fix it, then **Run again** — it resumes at row N.
A cell has text instead of a dollar amount	The calculator returned no fee for that row — check it by hand.
The app won't start / antivirus blocks it	Send this to IT: *Please allow-list (or code-sign)* `STRAFE Fee Calculator.exe`
